L'glutamate-gated chloride channel proteins (GluCil and GluCi)
and nucleic acid molecules encoding such proteins. GluCil channel
proteins are useful for identifying modulators. The compounds
identified as modulators are useful for insecticidal, mitacidal
and/or nematocidal treatment for use in animal and human health
and/or crop protection. The compounds are also useful in screening
for and selecting compounds active against parasitic invertebrate
species relevant to animal and human health, including worms,
fleas, ticks, mites and lice. Heterologous cell lines expressing
functional GluCil and GluCil channel functional forms are useful
for establishing functional or binding assays to identify novel
GluCil channel modulators. The present sequence is R. sanguineus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel L-glutamate-gated chloride channel proteins from Rhipicephalus sanguineus for identifying compounds which modulate the channel proteins, which are useful as insecticides, anthelmintics and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CDS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to Rhipicephalus sanguineus (brown dog tick)
C L-glutamate-gated chloride channel proteins (GluCl and GluCl2)
C and nucleic acid molecules encoding such proteins. GluCl channel
C proteins are useful for identifying modulators. The compounds
C identified as modulators are useful for insecticidal, mitacidal
C and/or nematocidal treatment for use in animal and human health
C and/or crop protection. The compounds are also useful in screening
C for and selecting compounds active against parasitic invertebrate
C species relevant to animal and human health, including worms,
C fleas, ticks, mites and lice. Heterologous cell lines expressing
C functional GluCl1 and GluCl2 channel functional forms are useful
C for establishing functional or binding assays to identify novel
C GluCl channel modulators. The present sequence is R. sanguineus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                GluCl1 cDNA clone,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to gamma-aminobutyric acid (GABA)-gated chloride channels and their corresponding nucleic acid molecules. GABA-gated chloride channel proteins and DNA's are useful for preventing and treating tick infestation, particularly in humans, dogs, cattle, horses, deer, or other wild or domesticated animals. The nucleic acids are useful as hybridisation probes or Polymerase Chain Reaction primers for identifying the presence of Dermacentor variabilis GABA-gated chloride channel nucleic acid or DNA's encoding for a GABA receptor. The nucleic acids are also useful for the recombinant expression of D. variabilis GABA-gated chloride channel proteins exert toxic effects on other ticks or related parasites such as mites. The present sequence is Dermacentor variabilis clone 5 GABA-gated chloride channel DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New polypeptide useful for preventing or treating tick infestation, in humans, dogs, cattle, horses, deer, or other wild or domesticated animals, comprises the Dermacentor variabilis gamma-aminobutyric acid (GABA)-gated chloride channel -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           chloride channel proteins and DNA's are useful for preventing and treating tick infestation, particularly in humans, dogs, cattle, horses, deer, or other wild or domesticated animals. The nucleic acids are usefu as hybridisation probes or Polymerase Chain Reaction primers for identifying the presence of Dermacentor variabilis GABA-gated chloride channel nucleic acid or DNA's encoding for a GABA receptor. The nucleic acid or DNA's encoding for a GABA receptor. The nucleic acids are also useful for the recombinant expression of D. variabilis GABA-gated chloride channel proteins. GABA-gated chloride channel proteins exert toxic effects on other ticks or related parasites such as mites. The present sequence is Dermacentor variabilis clone 8 GABA-gated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 1614
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 8; Fig 3; 59pp;

GABA-gated chloride channel proteins and DNA's are useful for preventing and treating tick infestation, particularly in humans, dogs, cattle, horses, deer, or other wild or domesticated animals. The nucleic acids are useful as hybridisation probes or Polymerase Chain Reaction primers for identifying the presence of Dermacentor variabilis GABA-gated chloride channel nucleic acid or DNA's encoding for a GABA receptor. The nucleic acids are also useful for the recombinant expression of D. variabilis GABA-gated chloride channel proteins expression of D. variabilis GABA-gated chloride channel proteins. The present sequence is Dermacentor variabilis clone 9 GABA-gated chloride channel proteins. The present sequence is Dermacentor variabilis clone 9 GABA-gated chloride channel proteins cated parasites such as mites. The present sequence is Dermacentor variabilis clone 9 GABA-gated chloride channel proteins cated parasites such as mites. The present sequence is Dermacentor variabilis clone 9 GABA-gated chloride channel parasites such as mites. The present sequence is Dermacentor variabilis clone 9 GABA-gated chloride channel parasites such as mites.
